

Applied Statistics: Time Series

Course introduction

Robin Delabays

September 10, 2026

Course organization

Day and time

Variable throughout the semester

Online material

All material will be made available from [this webpage](#).

Exams

First exam on November 10, 2026: Brief exam (most likely QCM), approx. 45 minutes.

Second exam on January 19, 2027: Longer exam with hands on, approx. 90 minutes.

Course wiki

Time Series

Course (approximate) schedule

15.9.26: Intro to the course and intro to time series

22.9.26: Recap of statistics

29.9.26: Advanced basics

6.10.26: *Lab on time series basics*

8.10.26: Recap on vectorial geometry

15.10.26: Fourier 1/2

20.10.26: Fourier 2/2

3.11.26: *Lab on Fourier*

9.11.26: Recap and mock exam

10.11.26: CC and correction

Time Series

Special needs

Some of you may need some specific arrangements for the courses and/or the exams.

My first suggestion is to make it official by talk to your *Responsable de filière* (Mme Birgit Sievert).

In case you need indeptendent help, you can reach out to our mediator: Laurence Laffargue-Rieder,
laurence.laffargue@hevs.ch

Finally, I strongly encourage you to tell me what I can do to help.

Additionnal reading: [Diversité et réussite dans l'enseignement supérieur](#)

Working practice

You are now in third year and I am sure that you know how to learn. I like to recap some (of my) good practices: – **Taking notes** helps you stay active and attentive to the class. – **Taking breaks** helps you study longer. More than two hours of studying in a row is counterproductive. – Remember that studying is a social activity. Of course, you are developing new skills for your future job, but you are also making new friendships that may last for long. So again, take some breaks. – For the same amount of time dedicated to the course, spreading it over a long period is much more efficient than using it all at the same time.

LLMs...

I will not tell you not to use it, but as everyone else, I will tell you to use it with care. LLMs are very strong tools for learning, but they can also dramatically deteriorate your work.

Use LLMs as sparring partners. Talk with it, challenge it. Make sure that you understand how and why it gave an answer.

If the LLM only gives you the answer, then you have learned nothing.

Cheating: We have had some strong suspicions of cheating using LLMs in the past. We will be extra careful from now on.
